The Life Cycle of Pacific Salmon

Notes:

Timing and length of any given stage vary among species of salmon (e.g., Chinook, sockeye). Timing is depicted for fall runs (e.g., spawn in fall, eggs hatch in spring)—reversed for spring runs.

Estuaries provide a mix of freshwater and saltwater.

Adults die after spawning; deteriorating carcasses provide essential nutrients to stream.

Disturbances at any stage can impact survival (e.g., obstructions to migration, floods, drought).

Pacific Salmon and Steelhead Recovery Domains

* The Oregon Coast Restoration Area was a recovery domain until 2005, when listing for the Oregon coast coho was determined not warranted.
